Somalis (Somali: Soomaalida) are an ethnic Cushitic peoples inhabiting the Horn of Africa. The overwhelming majority of Somalis speak the Somali language, which is part of the Cushitic branch of the Afroasiatic family. They are predominantly Sunni Muslim. Ethnic Somalis number around 28-30 million and are principally concentrated in Somalia (around 15 million), Ethiopia (8.5 million), Kenya (2 ...

Lipid decomposition studies in frozen fish have led to the development of a simple and rapid method for the extraction and purification of lipids from biological materials. The entire procedure can be carried out in approximately 10 minutes; it is efficient, reproducible, and free from deleterious manipulations. The wet tissue is homogenized with a mixture of chloroform and methanol in such ...

Genetics. One of the strongest evidences for common descent comes from gene sequences. Comparative sequence analysis examines the relationship between the DNA sequences of different species, producing several lines of evidence that confirm Darwin's original hypothesis of common descent. If the hypothesis of common descent is true, then species that share a common ancestor inherited that ...

The genetic modification of animals to obtain transgenic animals started in 1980. The first transgenic animals were mice, which are still the most frequently used transgenic species. About 20 transgenic species have been obtained and they are more or less currently used. Various methods are being implemented to transfer foreign genes to the different species.

### **Impacts of genetically modified animals on the ecosystem**

"New findings in molecular biology challenge the gene-centered version of Darwinian theory according to which adaptation occurs only through natural selection of chance DNA variations."

Welcome to the METAtenin Research website. METAtenin is a close cousin of melatonin. Melatonin, as you probably already know, is a secretion of the pineal gland that encourages our consciousness to enter the sleeping state.

There is a strong need for the development of new antiviral therapies, and this study sheds light on a host-virus interaction that is significant for a number of medically important human viruses. The study also suggests that the RNA-binding zinc finger CCCH-type containing 11A (ZC3H11A) protein takes part in a mechanism that facilitates nuclear export of mRNA, particularly under cellular ...
