Wound, ostomy, and continence nursing is a nursing specialty involved with the treatment of patients with acute and chronic wounds, patients with an ostomy (those who have had some kind of bowel or bladder diversion), and patients with incontinence conditions (those with issues of bladder control, bowel control, and associated skin care). Nurses in this specialty are often referred to as wound ...

INTRODUCTION. A wound is a disruption of the normal structure and function of the skin and skin architecture []. An acute wound has normal wound physiology, and healing is anticipated to progress through the normal stages of wound healing, whereas a chronic wound is defined as one that is physiologically impaired []. To ensure proper healing, the wound bed needs to be well vascularized, free of ...

Skilled Care for Problem Wounds. Some patients struggle with wounds that do not heal, even after weeks or months of care. Our Wound Healing and Hyperbaric Center offers specialized services for non-healing wounds.

### **Wound Care - KRMC**

Wound centers are organized in a variety of ways and can be free-standing clinics, housed within community hospitals, or at an academic medical center (). 8 In today's practice, many wound centers are part of a regional health care system or a national health care management group. These wound centers are staffed with a hybrid of part-time and full-time providers and support personnel.

A gunshot wound (GSW), also known as ballistic trauma, is a form of physical trauma sustained from the discharge of arms or munitions. The most common forms of ballistic trauma stem from firearms used in armed conflicts, civilian sporting, recreational pursuits and criminal activity. Damage is dependent on the firearm, bullet, velocity, entry point, and trajectory.
